

Concentrated Fuel Injector Cleaner System

A very high concentrated product for fast and effective cleaning of fuel injection systems. This product ensures that engines will achieve the maximum performance with minimum emissions.

The problem

The environment is becoming more important than ever before. That is why it is necessary that the fuel system must be cleaned, so the pollution the exhaust gases of petrol engines produce are less harmful.

One treatment ensures already following improvements:

- Cleaning and protecting of the complete injection system (injectors, flaps, pump, piping etc..)
- Increases octane number of the petrol and improves the acceleration of the engine.
- Prevents getting bogged down of the injectors and pump by disposing the water (condense) from the petrol.
- Reduces the fuel consumption thanks to the anti wear properties.
- Reduce the noise of the engine thanks to the lubrication properties.
- Reduces the exhaust smoke simplifies again adjusting the engine in accordance to the emission-demands.

The action

Bardahl Concentrated Fuel Injector Cleaner System contains a mixture of solvents that clean the fuel system. It cleans fuel piping, the pump, the injection needles, the flaps and the combustion chamber. Thus an exuberant fuel consumption is avoided, the cold start is simplified and the engine power is restored. Also the emission of detrimental gases (HC, CO and Nox) is reduced.

Vast tests with several types of cars have shown, that **Bardahl Concentrated fuel Injector Cleaner System** dirt amputations on the sprays, intake valves and in the fuel canals effectively removes.

This product is miscible with each type of petrol and is harmless for the catalyst. This product is recommended by the most important engine constructors.
